

HONG KONG - PARIS - SHANGHAI - SHENZHEN

Save the dates

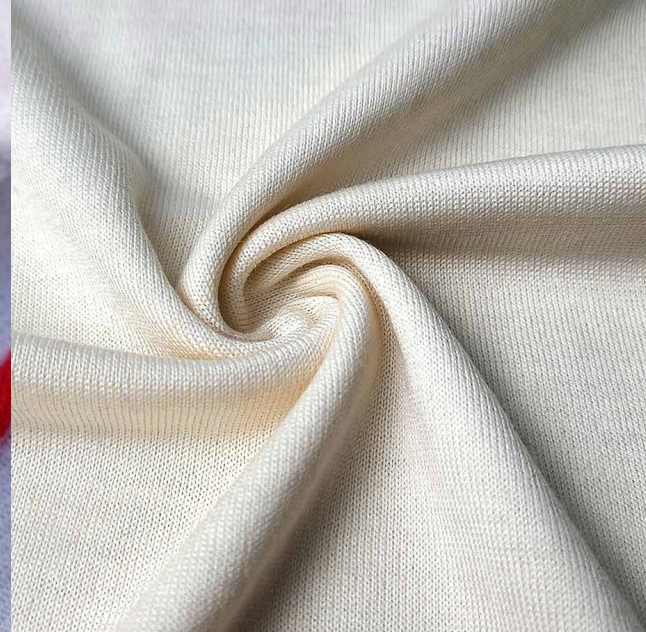

SPINEXPO™

organizes in Paris and Hong Kong
a presentation of spinning and knitwear AW 23-24 collections
through a simple presentation of the exhibitors' agents or export managers.

These "Business to Business" presentations gather

36 exhibiting companies during two days.

This is a preview of the SPINEXPO™ Shanghai exhibition
which will be held in Shanghai on August 30-31 / September 1, 2022.

Free entry to any company in the textile sector upon presentation of a business card.

YARNS FOR A HEALTH & SUSTAINABLE DEVELOPMENT FRIENDLY KNITWEAR

JIANGSU LUGANG

SCIENCE & TECHNOLOGY

is a spinning mill of worsted, semi-worsted, woollen and fancy yarns. Its products are presented in 4 individual collections: SERENATA (precious natural fiber collection), ARMONIA (luxury fancy yarn collection), COMPWOOL (compact yarn collection) and REGAL (value-for-money basic products).

Innovation is the strength of the company, which has its own research and development team.

The company is socially responsible, incorporating sustainability into its fiber selection and manufacturing process.

Novelties this season:

1. ZUES - 2/60 Nm 100% ultrafine merino wool

This yarn is a 100% Superfine merino wool. The slight curve of the merino fiber ensures the fabric's excellent recovery, fluffy and full hand feel, and good warmth retention. These result to a luxury sense brought from the fine yarn count fabric. On offer: 90 classic and trendy colors in stock service for supporting the high-end fast fashion.

2. BERNINI - 2/16 Nm 100% traceable yak

In 2020, the company has established a traceable transparent supply chain for yak fiber with the Norwegian DNV certification organization. The origin of each cone can be traced back to the specific yak farm level, and consumer can clearly understand the whole production process with relevant traceability tags. The fabric has good elasticity, feels fluffy and full, and has good warmth retention. Lugang provides primary color of yak fiber to avoid possible damage to the fiber and reduce pollution, which aim to advocate the concept of sustainability.

3. KFHY 22214-2 - 1/40 Nm 82% rws wool

18% nylon

To meet the demand of sporting goods designers, Lugang offers a wool yarn with excellent elasticity for tight knitting or weaving with reliable anti-pilling properties. This yarn provides new inspiration for knitwear and sports textile products.

4. KFHS22224 - 1/2 - 1/13 Nm 31% alpaca

31% rws wool 35% recycle polyester 3% spandex
To meet the ever-changing trends, a range of changing colors effects has been developed for this yarn, which uses Responsible Wool Standard (RWS) fiber, Responsible Alpaca Standard (RAS) fiber and recycled polyester fiber, combining the ecological concept with high-end fashion.

5. ISAAC - 1/25 Nm 40% mohair 20% wool

35% nylon

A fine brushed yarn that contains a high proportion of top quality South African mohair and wool fibers. The feel is soft and smooth, pleasant on the skin. It is suitable for romantic and casual fashion thanks to different construction patterns, and is offered in 30 colors in stock service.

HUAJIANA CASHMERE

benefits from the experience of three generations dedicated to the cashmere fiber. The company has been constantly searching for the best quality for more than 30 years; it has a large stock of raw materials, ensuring a stock service for quick delivery. The whole industrial chain develops from North to South China, in Inner Mongolia, Hebei, Anhui, Zhejiang, and Shanghai; Several branches also exist in Europe and South Korea. In order to better serve its customers, since 2022, Huajiana Cashmere has been cooperating with university research institutes and overseas designers to regularly create new products, improve their performance and multi-functionality such as antibacterial properties and degradability.

1. HOME 2/26 Nm 100% cashmere

A sustainable collection of classic soft and warm products, allowing knitters to create unlimited combinations from a single range.

2. DEGRADABLE 2/26 Nm 50% cashmere

50% corn fiber

Corn fiber was incorporated into the development of the yarn because when it is shelled, the residue accelerates degradation in the microbial environment. The yarn does not absorb water easily, and a quick drying and cooling effect can be achieved.

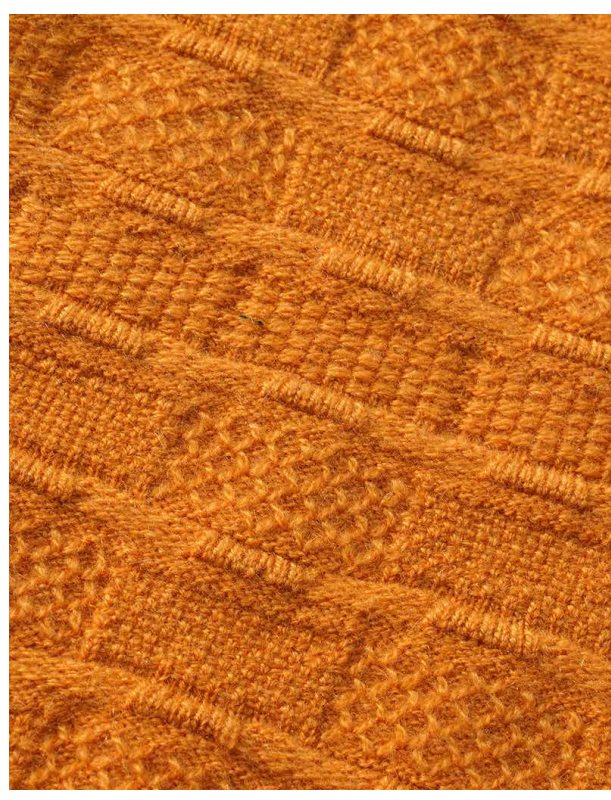

3. HONOR 3/72 Nm 100% cashmere

A collection of classic yarns used for men's suits, underwear and vests. It is a smooth yarn that is pleasant to the touch, breathable, and perfectly suited for all seasons.

4. VIRAL BLOCKING YARN 2/26 Nm

100% Cashmere

In 2022, Huajiana developed a new antibacterial technology, allowing bacteria to be blocked even after repeated washing. This is a technology that can be used for blended yarns to meet the demands of affordable cashmere yarns.
