### FOCUS IS ON SUSTAINABLE PRODUCTS FITTING THE GROWING AWARENESS OF THE GLOBAL POPULATION FOR HEALTHIER AND BETTER PRODUCTS WHEN IT COMES TO ENVIRONMENT

#### LENZING

**is celebrating its first anniversary of carbon-zero TENCEL™ branded fibres and the expansion of LENZING REFIBRA™ technology, a fibre selected by numerous spinning mills exhibiting at SPINEXPO.**

This expansion aims to provide more innovative solutions for fashion brands to meet carbon reduction targets and consumers to enjoy sustainable products, reinforcing Lenzing's commitment to achieving net-zero CO<sub>2</sub> emissions by 2050. It also addresses the growing industry demand around "circular fashion" and carbon neutrality.

Lenzing is committed to building a truly sustainable textile industry, not only through the reduction of carbon footprint, but also via increased circularity through the REFIBRA™ technology. This innovation reinforces Lenzing's ongoing effort to the Science Based Targets (SBT) initiative and support of the United Nations Sustainable Development Goals to limit global warming.

Although more supply chain partners, brands, and retailers are proactively searching for ways to reduce carbon emissions to align with the United Nation's global climate goals, the textile industry still has a long journey ahead to reach its goal of carbon-zero status. Lenzing hopes that, by sharing their latest innovations such as the carbon-zero TENCEL™ branded fibers with REFIBRA™ technology, they can make carbon-zero initiatives mainstream practices, ultimately achieving a carbon neutral textile industry.

By offering carbon-zero TENCEL™ fibers with REFIBRA™ technology, Lenzing provides the industry more sustainable material options right from the beginning of the product life cycle, bringing Lenzing one step closer to its goal of reaching zero carbon emissions by 2050. Moving forward, Lenzing will continue to work with industry partners to reduce the product's carbon footprint and offset unavoidable emissions to ultimately drive decarbonization in the textile industry.

#### ESQUEL

**aims to "make a difference" by combining sustainability and comfort.**

This is the vision of ESQUEL, which always aligns its efforts with the values of sustainable practices as the driving force behind its growth.

Sustainability and well-being are inseparable, as consumers are increasingly aware of their importance. The appreciation of nature is driven by a desire for peace of mind.

While working on sustainability, comfort is always at the heart of the mill's concerns. The line between work, rest and play is blurring.

With the lifestyle changes brought about by the recent pandemic, improvements in functionality and versatility are essential, and these are achieved through Esquel signature technologies and custom yarn updates.

Don't forget
