Free entry to any company in the textile sector upon presentation of a business card.

ZHONGDING AIMS TO BE ENVIRONMENTALLY RESPONSIBLE WHILE OFFERING SUPERIOR PRODUCTS TO ITS CUSTOMERS

For the past 20 years, ZhongDing has been selecting the purest natural fibres, such as cashmere and merino wool. With its innovative research and development technology, the company produces high quality classic yarns suitable for high-end knitwear while continuing to improve technical integration in its production processes to increase productivity.

ZhongDing has ventured down the path of sustainable development by cooperating with leading companies in sustainable production and has established a cashmere research institute focusing on research and technological development in Qinghai and Alashan. Through strict control of the industrial supply chain, starting from pastoral areas, raw materials, carding, yarn development, dyeing, spinning to inventory service management, ZhongDing aims to be environmentally responsible while offering superior products to its customers.

The introduction of the antibacterial and health functions of wormwood fibre, which incorporates renewable resources such as the biosourced polyamide fibre Terry, gives the product highly effective and long-lasting natural plant-based cleaning properties.

The excellent elasticity of the very fine wool compensates for the wrinkling tendency of the cotton fibre. Thanks to this optimal combination, the fabric's shape retention, wear resistance, ease of care and functionality are improved, and the product's scope of application is broadened, while reflecting low-carbon environmental protection in line with international green and sustainable fashion.

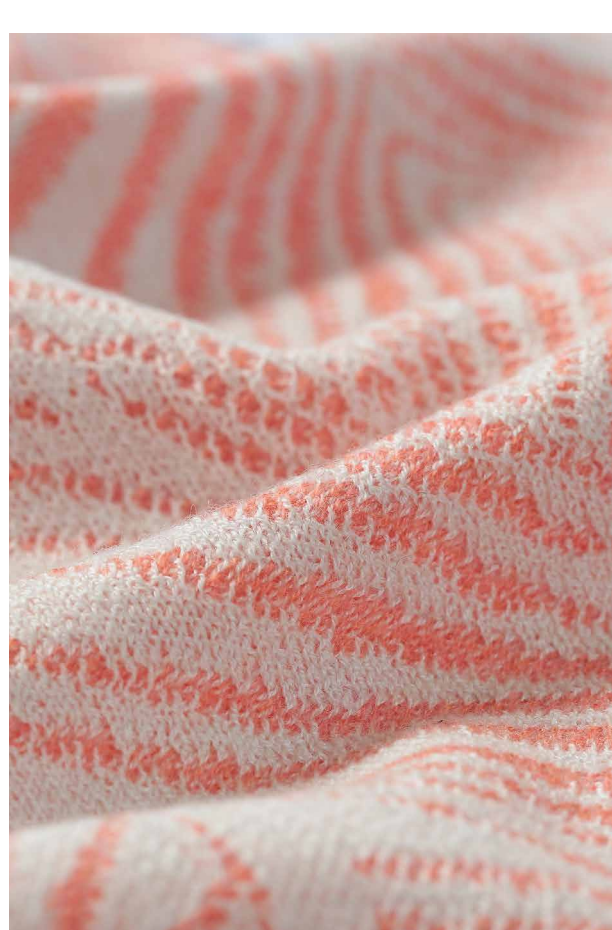

The product is light, thin, delicate, naturally antibacterial, and also has moisture and perspiration absorption capabilities. It is comfortable, anti-odour, anti-ultraviolet and meets the standards of ecological products.

Thanks to the combination of cotton, wool fibres and fine elastic fibres, the yarn has good elasticity, is dry and comfortable, absorbent, moisture permeable, wear resistant and pilling resistant.

2022 was the year of ZhongDing's IPO: the spinning mill was faced with the sudden outbreak of COVID-19 in China and its lock-in policy. A colour management system was developed through years of innovation and experimentation and to improve delivery, stock services were prepared for the main grades with over 700 colours. ZhongDing has an adequate stock of raw white ready to be dyed into skeins for its customers' colours. The mill expands and improves the semi-perforated production lines through technology optimization and introduces automated manufacturing capacity to achieve the fast response capacity to the market.

Zhongding has established several branches in the UK, Hong Kong and Japan, to offer higher standards of sales and service and to ensure the interest of its customers by receiving first-hand information on collections and deliveries.

Don't forget

SPINEXPO SHANGHAI

30-31 AUGUST / 1ST SEPT. 2022
