YARNS - FIBRES - KNITWEAR - KNITTED PRODUCTS

## SUSTAINABLE DEVELOPMENT

Loyal Light continues to fine-tune its fancy yarns and offers innovative collections each season, while putting sustainability at the heart of its spinning mill's Research and Development.

### LOYAL LIGHT

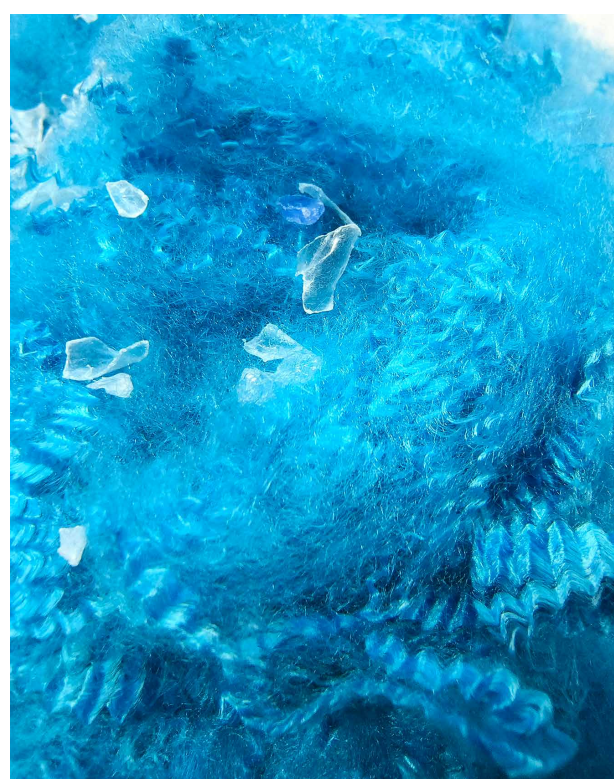

Loyal Light Fancy Yarns is a leading vertical spinning mill based in Fuzhou, Jiangxi province, China. Since 1989, its ranges of novelty fancy yarns have been selected by specialty stores, mass market retailers, department stores and knitwear manufacturers around the world. Since 2012, the production structure has included the manufacture and dyeing of raw materials, as well as research and development for its spinning mill.

The polyester filament production plant uses a combination of recycled polyester chips and new materials, resulting in an annual output of 7,500 tonnes.

Colour pigment chips are incorporated with the recycled polyester chips and the desired colours are obtained by melting this mixture at high temperature.

This colouring method is known as "dope dyeing" and eliminates the need for a water dyeing process.

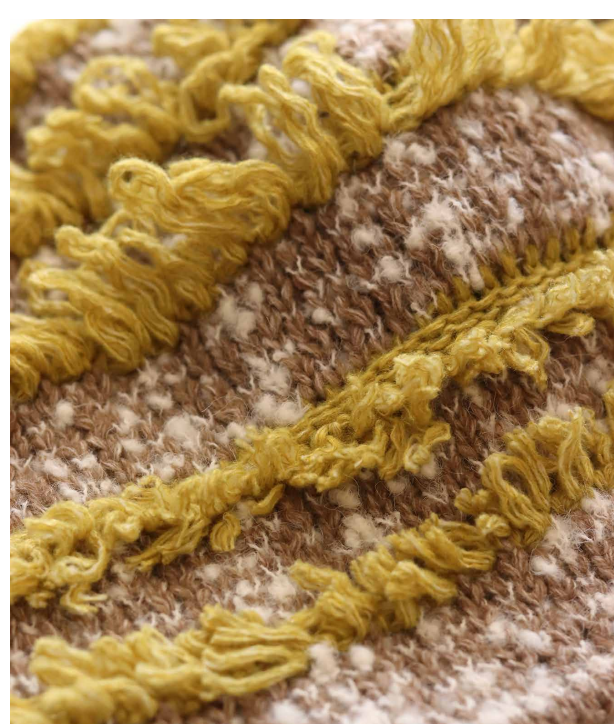

Water consumption is significantly lower than with the conventional top/tie/cone dyeing method, with a reduction of 88% in the amount of water used.

In 2022, 92/100 million tonnes of textile waste ended up in landfill. Due to the non-biodegradable nature of most clothing, textile parts remain in landfill sites for hundreds of years. The toxic chemicals resulting from the treatment of this textile waste end up seeping into the surrounding land and water, rendering it impossible to cultivate and the water undrinkable.

Loyal Light's long-term objective is to add performance qualities to polyester materials, the company having now explored all the capabilities of polyester.

As well as reducing water consumption in the production of yarn, Loyal Light is committed to sustainable development and is in discussions with its suppliers to add decomposition properties to the materials used, which would speed up the decomposition of the garment and reduce textile waste in landfill sites.

SPINEXPO™ will be showcasing a mini collection made from LOYAL LIGHT polyester yarns in its trend area. The pieces produced using these polyester yarns are modern and feel like cashmere.
