REBELLION

IS THE KEY WORD FOR SPINEXPO TRENDS

FOR SPRING/SUMMER 2025

Being rebellious can take many forms, and we've chosen to cover 4 very different directions, leading to a revolution in materials for greater well-being, and which are a way of expressing our emotions, our need to be consistent by selecting seductive textures, warming colors and embracing soft touches.

TREND 1

AUTOGRAPH

SIGNATURE FOR THE VOICE OF REASON

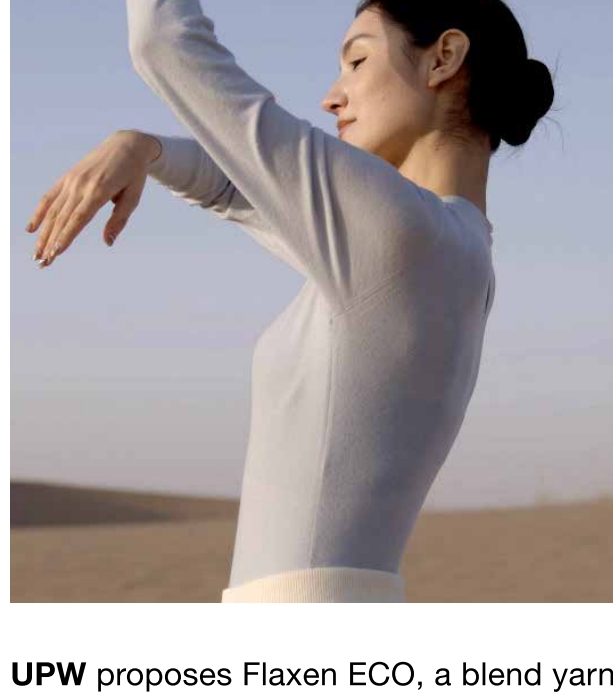

The emphasis is on what brings us together rather than what divides us.

A definitively pacifist movement inspired by the need to clean up the planet, to reclaim it;

A new creativity that expresses itself freely, for inventive recycling in reaction to pollution and waste. We are committed to reclaiming, recycling and mixing the new with the old, in a way that may seem messy, but is in fact constructive.

OUR EXHIBITORS' PROPOSALS

UPW proposes Flaxen ECO, a blend yarn of linen, cotton and recycled polyester, one of their top quality for SS 2025.

The label RPC ensure all polyester infused yarns utilize 100% recycled polyester materials. Also in the collection, Miami ECO, an interesting mix of cotton, Naia™ Renew Acetate and Abacell®, a fibre derived from Abaca and Washi paper. Aria ECO is a mix of top quality organic cotton and SeaCell™ Lyocell, a sustainable fiber made from seaweed which protects the skin from free radicals.

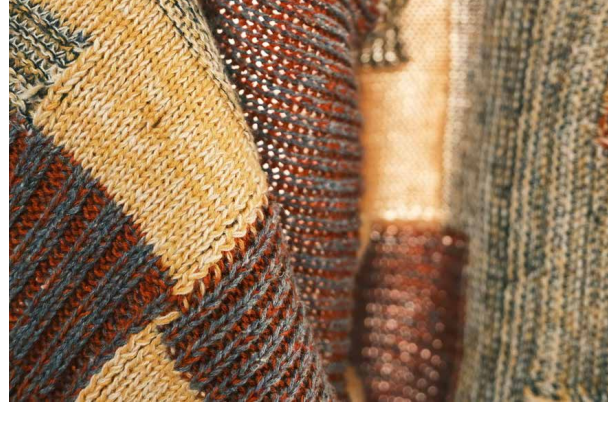

HUAJIANA Ocean-A contains chitosan, derived from shellfish, making it a grade 5-A natural antibacterial material. Combined with Lyocell, silk and cashmere, it combines softness, skin-friendliness and lightness. Nature-A is another yarn combining corn fiber, Lyocell and cashmere. Corn fiber contains polylactic acid (PLA), derived from starch-rich plants (corn and wheat), which is antibacterial and fully biodegradable.

CONSINEE Group's TILIA yarn is a combination of 4 different materials: Ecopaper™ cotton, silk and cashmere, making it a yarn of sustainable and biodegradable origin.

YUNA, a yarn from **DASHING** spinning mill, is biodegradable and made from 50% Ecopaper, 40% organic cotton and 10% silk. Moisture-absorbing and quick-drying, it's dry and crisp.

YARNS & COLORS yarn EVOKA is made of Viscose, Aramid fibre and Conductive fibre, making it flame-retardant and a conductive functional yarn that can eliminate static electricity that can make cloth cling to the body. It is difficult to stain and easy to clean.

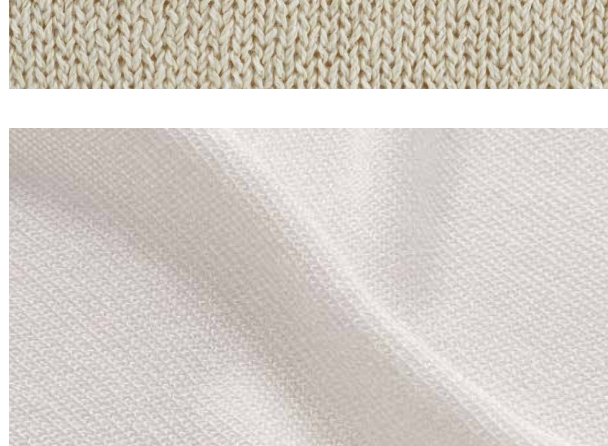

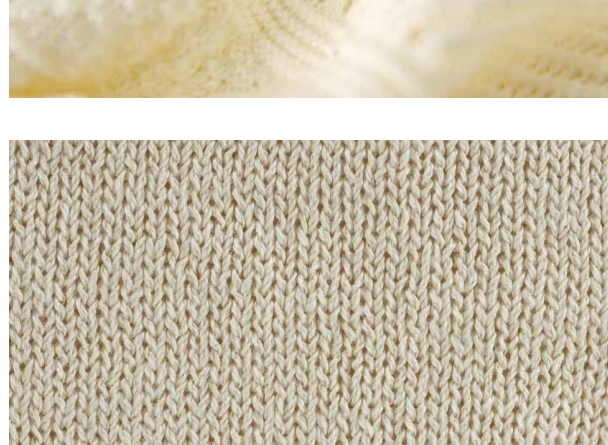

ZHONGDING yarn SHEEN is a blend of 35% merino 35% viscose 30% recycled nylon, 2/48Nm, in which the recycled nylon is produced by the discarded fishing nets from the ocean, positioning the yarn as a sustainable fashion yarn.

SHILEAD introduces WTS-XLD206A, which contains 23% Circulose, developed by the Swedish Company Re:newcell. The production process uses the waste textile to make pulp and spins it into viscose fiber. This yarn is blent with linen and recycle polyester for additional sustainability.

XINFANG CLEON is made from 100% Eco Jilin viscose, produced by Jihua. Its properties are antibacterial and odor-resistant. The yarn can decompose and degrade in the soil, contributing to a more sustainable waste management system. XINFANG also uses circulose for its PIETRA article, blended with linen and nylon.

The **HUBO** spinning mill's collection includes many yarns dedicated to environmental protection : from the integration of Biofiber™ linen, paper yarn, Naia™ and organic cotton. A collection targeting moisture absorption, breathability, natural antibacterial, antistatic as well as ecological characteristics.
