HUAJIANA CASHMERE

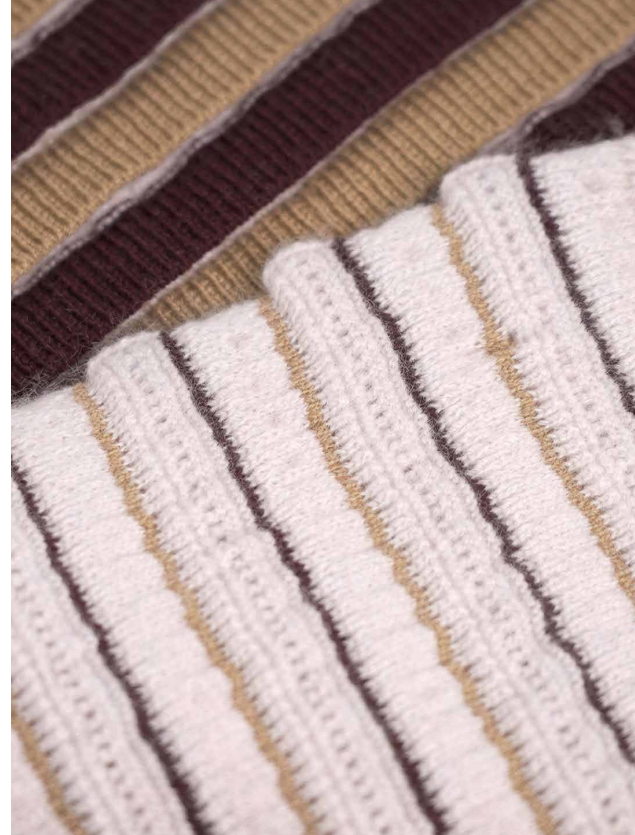

PIONEERING A NEW TRACK IN FUNCTIONAL CASHMERE

"If cashmere once earned market recognition through luxury, softness, and warmth, customers now want it to be smarter."

Modern consumers are no longer satisfied with just natural comfort and warmth—they increasingly demand functionality and scenario-based applications and demand more "experiential dimensions".

Huajiana Cashmere has specialized in the cashmere industry for over forty years. In the view of Galen, the third generation of Huajiana Cashmere, cashmere is almost synonymous with "stability" in the consumer goods industry, characterized by stable products and business models and need to break new ground through innovation.

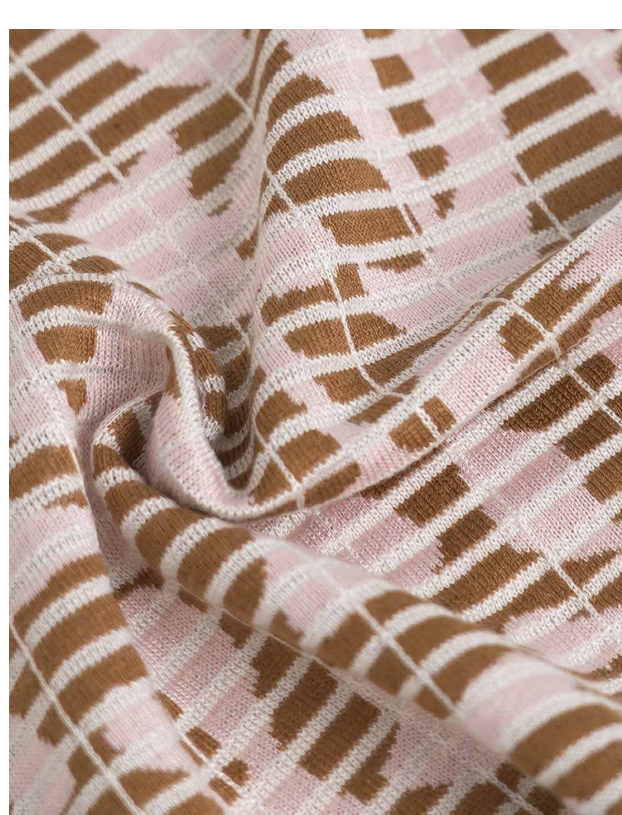

In response to market trends, Huajiana has developed a "3+3" strategy and has segmented the market into three product lines: the fashion-classic HUAJIANA series, the functional cashmere HJN series, and the trendy fancy yarn GANA series.

The "HJN" series is currently the key development direction focusing on the intensive research and innovation of cashmere functionality. By leveraging new materials, innovative techniques, and technological empowerment, the products retain the natural advantages of cashmere while being endowed with additional functional features, such as moisture absorption and breathability, skin care, self-heating, antibacterial, and anti-static properties.

This redefines the performance boundaries of cashmere apparel and explores the full potential of high-end materials.

The company actively engages in international collaborations on emerging technologies, integrating new materials such as Eastman diacetate from the U.S., Mitsubishi triacetate from Japan, bamboo rayon fiber, PLA, and chitosan with cashmere through advanced processes. The result is a new generation of products that combine the natural benefits of cashmere with the strengths of man-made materials, making cashmere yarns more "intelligent and practical" while preserving their skin-friendly and breathable qualities—perfectly meeting the demands of various consumer scenarios.
