SAVE THE DATES SPINEXPO™ SHANGHAI

29-30-31 AUGUST 2023

WORLD EXPO EXHIBITION & CONVENTION CENTRE

1099 GUOZHAN RD, PUDONG, SHANGHAI, CHINA

THE PRIMARY EXHIBITION FOR YARNS & KNITWEAR

SPINEXPO™ is a medium size, international and selective textile exhibition featuring mid to high-end exhibitors in the fibre, spinning and knitwear sectors.

SPINEXPO™ plays host to a large range of companies specialising in knitwear design and manufacture. Most of the knitwear manufacturers have their own collections and a Research & Development department, capable of working directly with international brands.

You can view the extensive list of exhibitors and show specific information, 175 exhibitors, specialists of their sector, are expecting your visit!

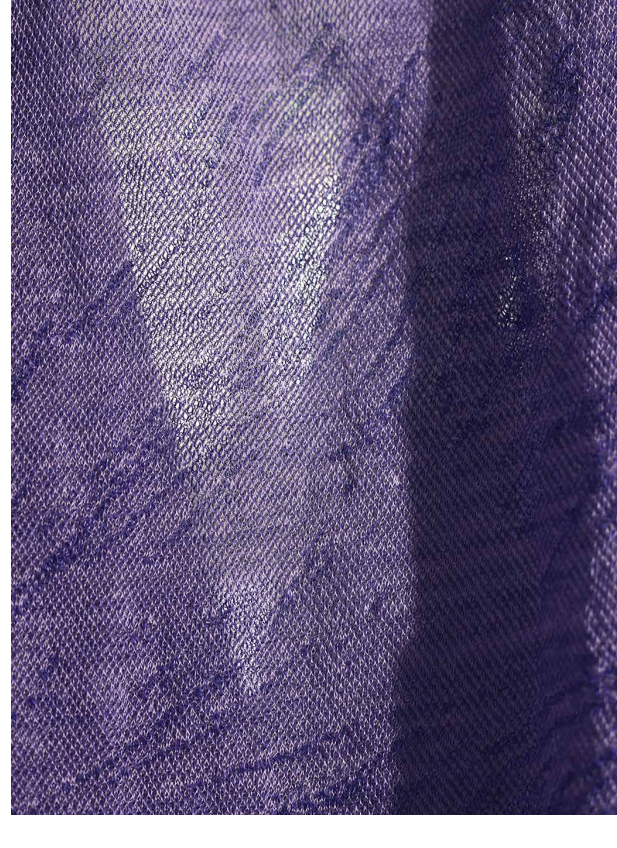

For the coming AW 24-25, in the course of our journey into « From Tradition to Modernity », our third trend, dedicated to circular knit, is « MIXMATCHING », entrusted to SPINEXPO™ specialist, Eva de Laat.

CIRCULAR KNIT - PART 2

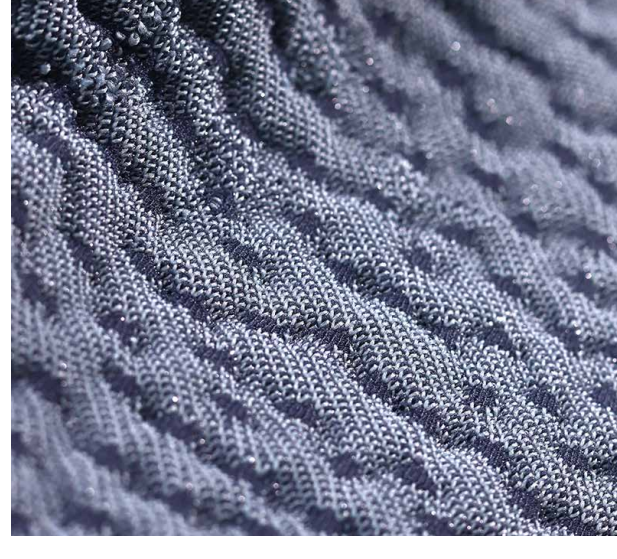

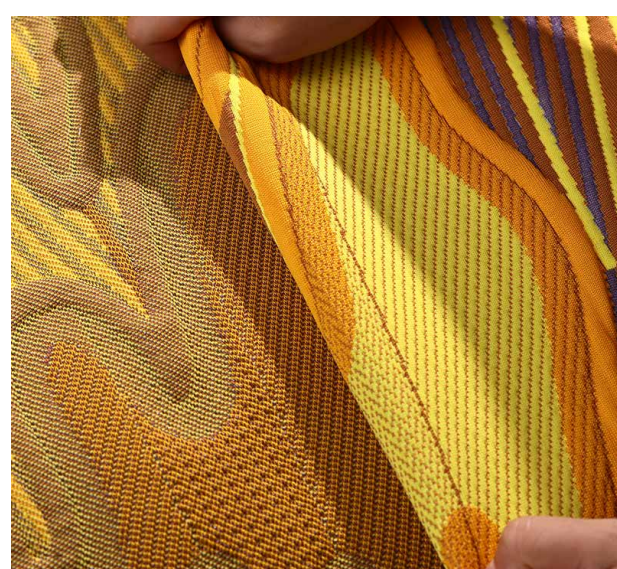

Mixmatching is a symbol of change - an invitation to step out of our comfort zones and embrace the unfamiliar.

As we draw inspiration from the memories of water and its connection to the water cycle, we recognize the importance of change in our lives. From the five stages of change - precontemplation, contemplation, determination, action, and maintenance - we realize that change is a journey, a process of transformation that requires commitment, willpower, and courage.

With Lugang yarns, we explored a perfectly refined circular knit yarn to create the next generation of second skin garments.

Finding wool well suited to circular technology is a challenge, but when we come across yarns refined for circular knitting we are filled with many possibilities. One of the great benefits of merino wool is its ability to deliver many functional aspects whilst remaining a lightweight second skin.

Inspired by the ruggedness of outdoor sports and the functionality of workwear, this trend celebrates the art of layering and mixing different articles of clothing for a rustic and down-to-earth look.

With a conflict-free symbiosis between the physical world and the digital world, unconventional materials and trims are incorporated into garments, creating a multi-coloured range of diversity, heterogeneity, and plurality.

And so, we proudly present our textile collection - S T E P O U T - a celebration of change and transformation, a tribute to the beauty of letting go and allowing the outside to shape and mould us.

For this presentation, we used new yarns that blend and mix match different fibres to draw in the benefits of different fibre qualities and sustainable production methods. This range explores the potential of synthetics through to naturals and these characteristics can grow from the yarn-up into many applications. For each part of the capsule one yarn supplier is used highlighting its specific strengths, consumer value and expertise.

With Shi Kwan yarns, blending of fibres, be that synthetic or natural, offers unique textures and finishes. We explore how these yarns combine with stitches to create colouring, texture combinations and functional qualities.

From these textiles we visualise the creation of a range of lifestyle products with a sports tailoring twist, as well as accompanying accessories & home textiles.

With Xinao, we explore different wool blends from base to mid layer, we can show off wools natural abilities and use blends that harbour these features. Exploring different wool blends from base to mid layer, we can show off wools natural abilities and use blends that harbour these features. Xinao's range of wool can be used to create a number of different textiles, and we are showing this off by creating mid-layers, footwear, and interior textiles.

With Yarns & Colors, a selection offers a range of synthetics and natural blends, utilised to create stunning visuals on athletic wear and footwear. Yarns & Colors range of yarns offers blends of synthetics and natural blends that have possibilities of being knitted on single & double jersey machines, as well as footwear machines. This allows us to be bold with our textile exploration, and we explored 3D structures and functional textiles in both sports-wear and footwear.
